SECRET

P 30355

PRIME MINISTER

CHEQUERS MEETING ON THE NATIONAL HEALTH SERVICE

Sunday 27 March at 11.00 am

1. The aim is to get insights into how the NHS might be reformed, from people with first-hand experience of how it works.

HANDLING

2. You may wish to:

i. make some brief opening remarks, on the lines of paragraph 3 below;

ii. invite Sir John Butterfield to start off the discussion (he will come prepared);

iii. then throw open the discussion, using the checklist of topics in paragraph 4.

OPENING REMARKS

3. You might begin by making the following points.

i. This is a private occasion. Everyone has come on the basis that the confidentiality of the occasion will be respected. So no press reports please.

ii. The agenda is the reform of the NHS: nothing more structured than that. I am chairing a group of colleagues reviewing health care in this country, with special - but not exclusive - emphasis on the hospitals. The Secretary of State

for Health, the Minister for Health and the Chief Secretary - all here today - are closely involved. We want to benefit from your first-hand experience of how the NHS is working.

iii. Nothing is ruled out (except requests for more cash). The present system of health care has its strengths and we want to preserve them. But we also want to strengthen it where it is weak.

iv. Procedure. I will ask Sir John Butterfield to start us off. Then I will throw open the debate and ask you what changes we should be making.

#### CHECKLIST OF POSSIBLE TOPICS

4. Possible topics for discussion (in no particular order) include:

##### The role of GPs

- How can they be made more conscious of costs?
- Could they carry out more minor surgery themselves, eg to reduce the load on hospital emergency departments?
- What use can we make of medical audits of GPs?

##### Nurses

- Is it right to have statutory backing for entry to the nursing profession?
- Nurses are a highly skilled resource. Do they do work which could be delegated to less skilled labour?

- No-strike pledge?
- Regional pay? (coupled with opting out for hospitals).

### Hospitals

- Who runs hospitals?
- How can they be managed more efficiently, and with greater consciousness of costs? Why is it taking such a long time to get proper budgets and monitoring?
- What should be done about consultants' contracts? and tenure? (n.b. link with abolition of Regional Health Authorities)
- How can we have more trading between hospitals? and between hospitals and the private sector?
- Why are some hospitals successful and others not? What lessons can be learned from the successful ones?
- What incentives can we provide to people working in hospitals to run their affairs more efficiently?
- Here again, what is the scope for greater use of medical audits?
- Is opting out for hospitals a viable option? If so, what would be the contract between the hospital and the District Health Authority?
- Are there other ways of freeing hospitals from bureaucracy eg privatising the construction of new hospitals, giving some - cottage hospitals perhaps - to charities, even management buyouts?

### Health Authorities

- Are Regional Health Authorities really necessary? What do they actually contribute to an efficient NHS? What could happen if they were abolished?
- Can District Health Authorities be streamlined?
- Could the role of District Health Authorities be shaped more on the lines of 'Health Maintenance Organisation' in the United States, driving down costs on behalf of their members, and possibly privatised?
- How can we reduce the bureaucracy?

### Patients

- How do we give patients more genuine choice about who treats them, when and where? When we talk about increasing patient choice, what does it mean in practice? What are the things which people might reasonably want to be able to buy, if they were allowed to?
- How can we reduce waiting times? Would computerisation of information about waiting times in different parts of the country be helpful?
- Has private insurance more of a role to play in the treatment of elective (cold) surgery?
- What would happen if we gave people more scope for providing for themselves, eg by allowing them to contract out of part of a compulsory health insurance scheme?
- Should schools and clubs be required to take out insurance against sports injuries?

- Are there some things which ought not to be free at the taxpayers' expense?

### General

- What lessons can be learned from other countries? Are there any good ideas/models which we should be studying in detail?
- What is the timescale for change? What are the first stepping-stones to long-term reform?
- Does it make sense to look for nation-wide solutions? Would it be more sensible to break down the problem and look at different approaches in different areas?
- How do we get more competition? Should there be advertising by GPs, doctors, consultants, hospitals?
- How do we ensure that the training needs of the medical profession are properly looked after in whatever system emerges?
- How do we better cater for the needs of the people who are unable to look after themselves - the geriatric cases, mentally ill and handicapped and chronic illnesses?

### CONCLUSION

3. In winding up you may wish to say that there will be no formal record of the discussion (although we will make notes for internal use), and remind people that it has been a private occasion.

R T J WILSON  
Cabinet Office  
25 March 1988

RA - NHS

FUNDING HEALTH CARE IN THE UK

R. Cawley

Each year increased amounts of money in real terms have been found for health care in this country. There is little likelihood that further demands will cease.

The following are some examples:-

Each year there is an increased expectation from patients. They believe that all research programmes are immediately available to them.

More sophisticated treatments will cost more initially but will yield economies in the long term.

An increase in age-related diseases.

Increased investment is needed in productive research. Some of this is exceedingly long term and commercial backers are hard to find.

Ultimately, the Government of the day will have to persuade the population at large to spend more on its own health provision, or to accept restrictions in availability or lowering of standards. In order to persuade ordinary people to adopt one of these attitudes, three things must be done:-

- A) Social Security must be separated from health provision and the cost of both programmes exposed. It is important that each individual understands how much he pays for his pension and for those less fortunate in society, and how much total health care provision actually costs.
- B) It will also be helpful to explain to each individual how much he or she spends on health care as a percentage of his income. A large number of people believe that National Health Insurance contributions totally fund the health care service while others believe that it is just a tax and that this is added to the general income of the Treasury, and from this the cost of the Health Service is procured. Both these ideas are misleading and unclear.
- C) Adults must be educated to understand that they fund health care. Money does not come from God, America or visitors from space.

There are three ways in which the Government can increase funds available for health care:-

I THE STATUS QUO

Present funding may be increased in a sporadic way in response to pressure from variously motivated groups. This gives the impression of a Ministry without policies and direction, and eventually will result in a political toll which may well be unacceptable. I think the present Government is strong enough to tackle the real issues and to at least consider further options, such as:-

II LOCAL FUNDING

Disassociate Health and Social Security, the latter being funded from central resources. Health care would take its funds from a local health levy derived as a percentage of each working person's income, and this would be collected either by the Inland Revenue, or by using the collecting agency of the proposed community tax.

Each unemployed person would have unemployment benefit increased by a percentage which would represent their contribution to their health care. This would be paid directly to the Health Authority. The percentage would be based on a national mean figure.

The elderly who have no other means of support would have their pensions increased by a similar percentage which again would be payable to the Health Authority.

In this way, these two groups would keep their dignity and would make a 'conceptual' contribution to their own health care. It would also mean that the impact of large numbers of those groups on health care would be lessened.

These health monies would then be paid directly to the Finance Department of the conurbation Health Authority. In this way, local people would fund their own local Health Authority and they would be responsible for their own local health care. Equally, local Health Authorities would be responsible to that conurbation for the provision of health facilities.

### Controls

There should be controls over the Health Authorities and this could be provided from a central Department of Health. These controls would include health care standards, planning and the provision of extra capital funds. It would be advisable for either capital or revenue to remain under the aegis of central government and all political input into the Health Authority should be prevented.

Further thought for later consideration would be:-

- a) To establish areas of health care which are more appropriate to the population it serves. It might well be better to combine several districts, perhaps part of a county, such as - in my own case - East Kent, ~~on the South Downs~~. This would help to alleviate a number of problems which might occur at a local level.

Undoubtedly there would be inequalities and a solution might well be for central government to provide extra funds to areas that are disadvantaged by an increased number of the aged or unemployed. However, even Liverpool has its Crosby and Southport to balance its books.

- b) In addition to these sources of income, central government could raise monies from a health tax on such obvious threats to health as cigarettes, alcohol and, as in Canada, by doubling the cost of a driving licence so that each driver pays an extra tax for health care. The Canadians, I believe, also tax any form of travel. In their opinion, any traveller has an increased risk of using the Accident and Emergency Services. It should be mandatory for foreigners to hold current health insurance cover.
- c) Lastly, it would not seem unreasonable that anyone who gives to the Health Service, either by omission or commission should gain something from this, such as tax incentives. For example, money given by local industry, unions, individuals, etc., to the Service, either for equipment or to some particular research project etc., should be treated as charitable monies and should be totally tax-allowable. On the other hand, if people living within that area take out private health insurance, and elect only to use private facilities - except where these facilities are only available on the NHS - then private insurance premiums should be tax-allowable.

### Introducing Local Funding

I have suggested the second option, not because I believe it is the final answer, but it is one way in which the Health Service could progress from what it is at the moment, which is basically an open-ended commitment, towards a system whereby there is a very obvious and causal relationship between the monies that each individual provides and the health care that he receives. In addition to this, it is important that the local health care facility should receive revenue at the point of usage and ultimately the establishment of a profit and loss situation in our local hospital facilities etc - even in general practice.

There must be local accountability and an obvious measure of efficiency. Each Unit General Manager should have an income which is dependent upon the service which is given. In this way, there would be more competition between facilities and standards would improve. There should be incentives for the managers - perhaps they should be paid on a per capita basis and certainly Consultants and General Practitioners could be paid on a fee per item service.

Alternatively, Consultants, General Practitioners and unit management might lease a DGH and offer total health care on one site.

### III THE INSURANCE SCHEME

The second option would be a way in which to introduce a mandatory insurance system, such as adopted by France and West Germany. Again mandatory insurance would be taken out of income at source and would go to either a State or smaller locally run insurance scheme. These schemes were popular in Canada, ie the Ontario Health Insurance Plan; a State (as opposed to a federal) insurance scheme. It was apparently more efficiently run when privately owned. Money would then be available to fund costs at either state or private hospitals and again, they would compete for patients and facilities in order to become more viable. Additional voluntary insurance programmes would secure more luxurious accommodation.

I think the combination of a public and private partnership in health management units <sup>is</sup> ~~is~~ a challenging possibility, and I think this should be explored in detail.

I am sure that if each working individual realises that he pays 3% of his income towards health care, then he would appreciate a local model such as the second alternative. Ultimately a mandatory insurance, using the same sort of figures for funding would be irresistible, especially when it was explained to him that in this way everyone would be a private patient.

ORGANISATION AND MANAGEMENT STRUCTURE IN THE NATIONAL HEALTH SERVICE

Present Structure - The Unit

The Unit Management Team is like a eunuch in the male voice choir. Largely ignored, works hard and does all the difficult bits. The unit actually looks after patients. In fact, the more patients that are seen and treated, the more efficient but costly and financially embarrassing it becomes. My own hospital is one of the most efficient in the country and it has the highest throughput and occupancy and the lowest mean patient stay. We have met our budget every year until now. Where are the thanks, the accolades, the acknowledgement? Certainly there have been no rewards. Not personal rewards but the opportunity of being able to develop our services here even further. Projections for the next year show a 1.25 million deficit while close neighbouring districts, who have been overspent for years, receive handouts from the Region.

The District

At District level, we have a Rear Admiral who is District General Manager. He is a charming man; he is certainly no fool and I suspect he knows the answer to many of our problems. However, he and the District Management Team have to gain the approval of the District Health Authority for any sweeping changes and the Authority is too easily swayed by local political opinion. All too often the failure to be decisive is preferable to a radical or effective decision. Many members of the Authority are representative of local pressure groups, for example a union or the Community Health Council, the General Practitioners etc. Thus, they represent factions and not the community at large.

The Regional Health Authority

The Regional Health Authority is responsible for monitoring the Districts. It has a small budget for sub-regional specialities such as renal medicine etc. It controls the distribution of capital funds for building etc., and is responsible for policy decisions Region wide. It does not treat patients.

Department of Health

The Department of Health is self-sufficient.

## PROPOSED CHANGES

The Department of Health should be separated from the Social Services. The acute services should be totally separate from the provision of chronic medical care, care of the elderly, the mentally ill and the handicapped.

The Department of Health should directly fund chronic medical care such as renal transplant programmes etc. It should monitor the provision of care throughout the country and in particular, the provision of facilities for the elderly and the mentally ill and the handicapped. It should have a budget for capital projects for the above and it probably has a statutory duty to provide advice and help to a number of other bodies such as medicine in industry etc.

### Clinical Areas

Administratively, Districts are too small to administer funds. They are too sensitive to fluctuations in the number of unemployed locally, and the number of elderly people in a small local community.

Clinical areas of perhaps 600,000 or more would be much more effective and services could be distributed in a more rational way. The Clinical Area Board would be responsible for the monitoring and provision of funds to acute general hospitals and to general practice within that clinical area. It would be responsible for monitoring these services and it would also be responsible for the provision of specialist facilities such as cardiac, thoracic, neurosurgical and paediatric units. It is possible that these facilities might be shared between one or more clinical areas as appropriate, or, with the private sector.

### Small Units

Throughout the country there are numerous small units such as small town hospitals and pseudo-specialist hospitals. For example, an orthopaedic unit or the so-called isolation or fever hospitals. There are also some isolated ENT and eye units. These are expensive, inefficient and in addition, they use other resources such as medical cover at night, extra transport costs and often satellite services of radiology and pathology. All such units and hospitals should be sold and the money reinvested in large central acute hospitals.

### Acute General Hospitals

A recent study by the Royal College of Surgeons on the provision of accident and emergency facilities has suggested that casualty departments should only be sited in large general acute units. Surely the same argument should be used for any of the major specialities. Acute general hospitals would be managed by hospital management committees and run by a manager, together with medical, nursing and lay input; in fact reverting to the old hospital management committee structures. Managers should be sensitive to local needs but ultimately be responsible to the Clinical Area Board.

Acute care in general hospitals should cope with the acutely ill from all sources but only with the right of return so that the beds can be used efficiently and costs kept to a minimum.

### Budgeting

Given a fixed budget, and if priorities are no longer changed from year to year, then sensible planning in acute health care becomes feasible. Large acute hospitals should have a fixed budget and be responsible for the acute care of all the various groups in that clinical area, as illustrated in the diagram. The care of the elderly and mentally infirm or handicapped should be adopted and funded by the Local Authority and this could be a levy on the rates or poll tax. Chronic medical care should be attached to acute units in order to share facilities such as x-ray and pathology but they must be separate entities and their beds should be delegated to that purpose. Examples are transplantation and programmes for immuno-incompetence. Chronic care should be funded by the Department of Health from central funds.

### Management

Although facile, the concept that managers should manage is nevertheless true and there is no place for medical specialists taking on executive positions within the structure described. Managers should manage the hotel; clinicians should manage patient care. Both should be subject to peer review. Managers should be responsible to the Clinical Area Board who, in turn should be subjected to an inspectorate from the Department of Health. As in previous communication, there could be an ombudsman at Clinical Area Board level to whom patients could

refer and he would act in their interests. The concept of clinical managers developed recently at Guy's Hospital is not new, but there is no reason at all why frontline clinical practitioners should not take on budgetary management for their departments. There would have to be some flexibility because of the unpredictable nature of emergencies, ie major accidents, plague, pestulence etc., but the average clinician has a very good idea from year to year what the numbers and demands on the department are going to be. All these services and facilities are very effectively costed in the private sector and I see no reason why this should not occur in the Health Service. A hospital manager, given this sort of information from each department, should be able to work out annual budgetary needs.

Out-patient attendance and admission should attract a basic fee and then remuneration could be assessed on the number of days in hospital and procedural based costing. Allowance would also have to be made for the age of hospital buildings, refurbishment, updating and special equipment in the medical budget each year.

#### Priorities

The provision of resources and of services is a managerial and political decision. Priorities may be medical, moral or ethical but they are not political. Another myth which needs to be dispelled is that high technological provision will ultimately reduce costs. It has never done this and is unlikely ever to do so in the future.

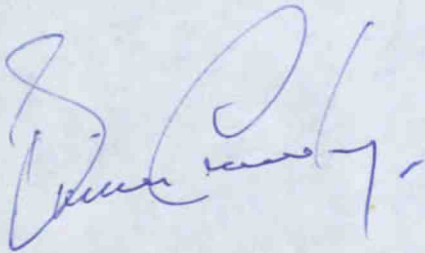

#### Summary

In essence the acute services should be singled out and brought as near a profit and loss situation as possible. Thus, the more efficient units can then develop their sites, make more facilities available and become more attractive for patients. It would also provide a more attractive medical climate for physicians and surgeons to work in.

Regions should disappear and their role be taken over by clinical areas. Long term care should be delegated to Local Authorities and should be funded from rates or poll tax.

Funding for acute care should come from the income of the working population; in other words a straight percentage of income. Chronic medical care should be the responsibility of the Department of Health and be funded centrally.

Capital projects within a Clinical Area Board could attract loans from the Department of Health, with capital funds ultimately coming from the health tax originating from income. The scheme overleaf describes these ideas graphically.

N U R S I N G

THE NEED FOR PROPER EDUCATION

Until recently, we have insisted on high educational standards from girls and boys entering nursing and then have been educated to a very high standard over three years. When qualified these same trained SRNs are treated like morons.

At present, as I have explained in my letter to the Minister, we now recruit people who are shed by Marks and Spencers. This is due to a number of reasons:-

The first thing is that there is certainly a lack of order and discipline in the way nursing students are taught. I think also their expectation of their future "ladder to success" has been marred by the Salmon organisation. I share the views of a number of my colleagues that SENs are the backbone of our caring nurse services and that in future, greater care should be taken over the selection of candidates to be State Registered Nurses.

I suggest that when State Registered Nurses have fulfilled their three year training and have taken their qualifying examinations, they should be expected to work in the department of their choice for an initial year before being given full registration as an SRN.

They would then be given a choice of four or more careers.

- 1) The first would be education. For this there would be a two year Diploma in Education course, following which they could then pursue a career in teaching and take post-diploma education up to a University Degree Course.
- 2) A career in clinical nursing should be preceded by a year of theory in ward management and man management followed by a practical year in the speciality ward of their choice. They could then pursue a clinical career and should be encouraged to produce research work and to attend post-graduate courses on other specialities, etc.
- 3) Again a year in preparation for a career in District or Community nursing would be the start of a three year sandwich course. The second year would be spent in practical monitored community service. The same sort of training would be appropriate to practice nurses and career posts in hospice management etc.

4) High dependency areas:-

Operating theatres, anaesthesia, ICU, maternity, CCU and renal units.

A reversed sandwich course might be more appropriate with full-time theory as a year enveloped by two years practical training.

Lastly, those who have a bent for administration and who are bright enough should be encouraged to take a proper University MBA Course so that we have real professionals in charge of nursing administration with a proper education. I think the SRNs of the future should be high flyers of the profession and the ladder should be incremental in each division and the rewards equivalent after the same years of service.

Issued 29 May 1986

## Mid 1985 population estimates for local government and health authority areas of England and Wales

This Monitor gives the Registrar General's estimates of the resident population at 30 June 1985. Tables 1 and 3 show the 'all ages' population estimates for local government and health authority areas respectively, and include corresponding figures for 1981 and 1984. Tables 1 and 3 also show the amount of natural change (numbers of births minus deaths) and population loss or gain due to migration (and other changes) since 1981. Tables 2 and 4 analyse the mid 1985 estimates of the resident population by broad age-group.

### Commentary

The estimate of the resident population of England and Wales at 30 June 1985 was 49,924 thousand persons, an increase of 160 thousand over a year earlier and 289 thousand since 1981. Most of the increase between 1984 and 1985 occurred within England, its population rising by 155 thousand persons (0.3 per cent) to 47,112 thousand. The population of Wales increased by 5 thousand persons (0.2 per cent) over the same period to reach 2,812 thousand. Just under half of the population growth in England and Wales in the year ending mid 1985 resulted from natural change and just over half from gains due to migration and other changes.

The national trends are discussed in more detail in *OPCS Monitor* PP1 86/1 (issued 29 April) which gives estimates of the resident population in total, and by single years of age and sex, at 30 June 1985 for England and Wales.

The sub-national estimates of year to year changes are more approximate and an assessment of trends should be based on figures over several years. This is primarily because of the uncertainty surrounding the estimation of migration. The following summary remarks about sub-national trends focus, therefore, on the 1981-85 period.

The decline in Greater London's population has ceased, at least for the present. Between 1984 and 1985 there were small increases in population for both Inner and Outer London. The population of Outer London at mid 1985 was the same as in 1981 but that for Inner London was still 38 thousand persons lower. Table A shows the marked reduction in the rate of decline of Greater London's population since the late 1970s.

Population losses within the metropolitan counties of England have continued, though generally at a lower rate than during the late 1970s and early 1980s (Table A). Merseyside is the metropolitan county with the largest fall in population, nearly 3 per cent since 1981. Within Merseyside the districts of Liverpool and Knowsley experienced the greatest losses (4-5 per cent). No other metropolitan districts experienced such large losses. The only metropolitan district to show any real growth since 1981 is Solihull in the West Midlands.

There has also been a reduction in the population losses from the biggest cities - that is, the metropolitan districts of Leeds, Newcastle, Birmingham, Sheffield, Manchester and Liverpool. As a whole the population of these districts fell by 0.5 per cent per annum during the 1981-85 period compared with 0.8 per cent in the late 1970s.

For the non-metropolitan counties as a whole the annual rate of population growth has been increasing since 1981. Nevertheless the average rate for this period was lower than that in the late 1970s (Table A).

The non-metropolitan counties with the greatest proportionate increases in population between 1981 and 1985 are in the south of England. Buckinghamshire, Dorset and Cambridgeshire all increased by around 5 per cent; Berkshire, Oxfordshire, Cornwall, Isle of Wight and Somerset by 4 per cent. At the district level, the largest increases were for Milton Keynes and Wokingham (22 and 16 per cent respectively). A number of retirement areas close to the south coast also experienced marked increases - for example Wimborne (10 per cent) and Christchurch (7 per cent). As a whole resort, port and retirement areas have increased their rates of growth during the 1980s.

Counties losing population over the 1981-85 period include Cleveland, Durham and West Glamorgan (each by about 2 per cent); and Humberside and Mid Glamorgan (1 per cent). The districts contributing most to these declines have tended to be those of an industrial or city type - for example Middlesbrough, Kingston-upon-Hull and Afan.

A more detailed account of recent population changes, and how they compare with those during the 1971-81 decade, will appear in the Summer issue of *Population Trends*. This article also examines the relative contributions of natural change and net migration in determining population changes.

#### Definition of resident population

The estimates of the resident population are derived from the 1981 Census of Population updated to allow for subsequent births, deaths and migration. They include residents of England and Wales temporarily outside the country and exclude foreign visitors; members of HM and foreign armed forces stationed in England and Wales are also included, but members of HM armed forces stationed abroad are not. Students are taken to be resident at their term-time address.

Table A Average annual population growth rates, 1977-85

Per 100 population

Area	Period					
	1977-81	1981-85	1981-82	1982-83	1983-84	1984-85
Metropolitan counties	-0.43	-0.34	-0.41	-0.30	-0.37	-0.26
Greater London	-0.75	-0.14	-0.58	-0.18	+0.02	+0.17
Non-metropolitan counties (incl. Wales)	+0.48	+0.38	+0.17	+0.31	+0.47	+0.56

### Methodological Updates

#### 1. DHA Boundaries

Split ward boundaries were introduced by OPCS for statistical processing as from 1 January 1985 with the result that certain district health authority (DHA) boundaries are now defined more accurately than hitherto. This follows an agreement reached between OPCS, DHSS and the Regional Health Authorities. Prior to this date, statistics for DHAs were based on the aggregation of information for whole wards; where a DHA boundary did not coincide with a ward boundary then the whole of the ward was assigned to the DHA containing the major part of the ward. This change causes some discontinuities between the mid 1985 estimates and those for earlier years. For the RHAs the discontinuities are negligible, and for most of the affected DHAs the population differences are less than 1 per cent. The DHAs affected are identified in Table 3; those with a discontinuity of one thousand persons or more are as follows: Airedale (-4,000) and Bradford (+4,000); Great Yarmouth and Waveney (-2,500), East Suffolk (-1,000), West Suffolk (+1,000) and Norwich (+3,000); West Lambeth (+7,000), Camberwell (-5,000) and Lewisham and North Southwark (-2,000); Oxfordshire (-2,000) and West Berkshire (+2,000); Southmead (-1,000) and Frenchay (+1,000); and Wirral (-1,000) and Chester (+1,000). Further details are available from the Population Estimates Unit, OPCS, Segensworth Road, Titchfield, Fareham, Hants PO15 5RR (Telephone 0329-42511 Extensions 201/381).

2. The Hammersmith and Fulham and Victoria DHAs were amalgamated into the new Riverside DHA on 1 April 1985.

#### 3. Dependents of foreign armed forces

The mid 1985 population estimates include a reassessment since 1981 of the estimated number of dependents of foreign armed forces stationed in England and Wales. The local authority (and health authority) districts mainly affected are as follows: Mid Bedfordshire (North Bedfordshire DHA); Huntingdonshire (Huntingdon and Peterborough DHAs); Peterborough (Peterborough DHA); Forest Heath (West Suffolk DHA); Suffolk Coastal (East Suffolk DHA); Thamesdown (Swindon DHA); Newbury (West Berkshire DHA); and Vale of White Horse and West Oxfordshire (Oxfordshire DHA). Further details are available from the Population Estimates Unit (Titchfield).

### Availability of population estimates

Population estimates by five year age-groups and sex, and the components of population change as given in Tables 1 and 3, are available on computer print-out or on computer tape for the years 1971 to 1985 for a relatively small cost. Further details can be obtained by writing to the Population Estimates Unit, OPCS, St Catherines House, 10 Kingsway, London WC2B 6JP; or by phoning 01-242-0262 extensions 2463/2474.

### STOP PRESS

#### Marital condition estimates 1971-84

Annual estimates of the resident population of England and Wales from 1971 to 1984 by single years of age, sex and marital condition, revised to take account of 1981 Census results, are now available from the Population Estimates Unit (London). Relevant publications will be updated as soon as possible.
